

ApproveJ Cheat Sheet

Quick reference for the public API, organized by the approval flow.

Entry Point

Method	Description
<code>ApprovalBuilder.approve(T value)</code>	Start building an approval for a value
<code>.named(String name)</code>	Custom name for the approval (used in filenames)
<code>.printedAs(PrintFormat) / .printedBy(Function) / .printed()</code>	Convert value to string
<code>.scrubbedOf(UnaryOperator<T> scrubber)</code>	Apply a scrubber to remove dynamic data
<code>.reviewedBy(FileReviewer) / .reviewedBy(String script)</code>	Set the file reviewer or review script
<code>.byValue(String previouslyApproved)</code>	Approve against an inline string
<code>.byFile() / .byFile(PathProvider Path String)</code>	Approve against a file next to the test (or at custom path)
<code>.by(Function<String, ApprovalResult>)</code>	Approve using a custom approver function

Print Formats

Factory Method	Description
<code>SingleLineStringPrintFormat.singleLineString()</code>	Print via <code>toString()</code> on a single line (default)
<code>MultiLineStringPrintFormat.multiLineString() / .sorted()</code>	Print each property on a new line (optionally sorted)
<code>JsonPrintFormat.json() / .json(ObjectMapper)</code>	Pretty print as JSON (requires <code>json-jackson</code> or <code>json-jackson3</code>)
<code>YamlPrintFormat.yaml() / .yaml(ObjectMapper)</code>	Print as YAML (requires <code>yaml-jackson</code> or <code>yaml-jackson3</code>)
<code>ReceivedHttpRequestPrintFormat.httpRequest()</code>	Print as HTTP request format (requires <code>http</code>)

Scrubbers

All factory methods are on the `Scrubbers` class unless otherwise noted.

String Scrubbers

Factory Method	Description
<code>strings(String first, String... more)</code>	Scrub specific string values
<code>stringsMatching(Pattern String pattern)</code>	Scrub strings matching a regex pattern
<code>uuids()</code>	Scrub UUID strings

Date/Time Scrubbers

Factory Method	Description
<code>dateTimeFormat(String pattern[, Locale])</code>	Scrub dates matching a <code>DateTimeFormatter</code> pattern
ISO scrubbers — all named <code>Scrubbers.isoX()</code> : Dates: <code>isoLocalDates</code> , <code>isoOffsetDates</code> , <code>isoDates</code> , <code>isoOrdinalDates</code> , <code>isoWeekDates</code> , <code>basicIsoDates</code> Times: <code>isoLocalTimes</code> , <code>isoOffsetTimes</code> , <code>isoTimes</code> Date-times: <code>isoLocalDateTimes</code> , <code>isoOffsetDateTimes</code> , <code>isoZonedDateTimes(+locale)</code> , <code>isoDateTimes(+locale)</code> , <code>isoInstants</code> , <code>rfc1123DateTimes</code>	Scrub ISO-formatted dates, times, and date-times

Field / JSON / HTTP Scrubbers

Factory Method	Description
<code>field(Class<T>, String fieldName)</code>	Scrub a field value on objects of the given type
<code>JsonPointerScrubber.jsonPointer(String)</code>	Scrub a JSON node at the given JSON Pointer path
<code>HttpScrubbers.headerValue(String)</code>	Scrub an HTTP header value by name
<code>HttpScrubbers.hostHeaderValue() / .userAgentHeaderValue()</code>	Scrub the <code>Host</code> or <code>User-agent</code> header value

Replacements

Factory Method	Description
<code>Replacements.numbered([String label])</code>	Replace with <code>[label 1]</code> , <code>[label 2]</code> , etc.
<code>Replacements.labeled(String label)</code>	Replace with <code>[scrubbed label]</code>
<code>Replacements.string(String replacement)</code>	Replace with a fixed string
<code>Replacements.relativeDate() / .relativeDateTime()</code>	Replace with relative date (e.g. <code>[today]</code> , <code>[yesterday]</code>)
<code>Replacements.masking()</code>	Replace characters with <code>*</code>

Approvers & Path Providers

Factory Method	Description
<code>PathProviders.nextToTest()</code>	Place files next to the test class (default)
<code>PathProviders.nextToTestInSubdirectory()</code>	Place files in a subdirectory named after the test class
<code>PathProviders.approvedPath(Path String)</code>	Use a specific approved file path

File Reviewers

Factory Method	Description
<code>Reviewers.none()</code>	Do nothing on mismatch (default)
<code>Reviewers.automatic()</code>	Automatically accept all received values
<code>Reviewers.script(String script)</code>	Run a script with <code>{receivedFile}</code> and <code>{approvedFile}</code> placeholders

Configuration Properties

Property	Environment Variable	Default
<code>defaultPrintFormat</code>	<code>APPROVEJ_DEFAULT_PRINT_FORMAT</code>	<code>singleLineString</code>
<code>defaultFileReviewer</code>	<code>APPROVEJ_DEFAULT_FILE_REVIEWER</code>	<code>none</code>
<code>defaultFileReviewerScript</code>	<code>APPROVEJ_DEFAULT_FILE_REVIEWER_SCRIPT</code>	<code>(none)</code>

Priority: env vars > project props (`src/test/resources/approvej.properties`) > user home props (`~/.config/approvej/approvej.properties`) > defaults.
